After show report Medlab Dubai 2022

**24 - 27
January 2022**

Medlab Middle East

Slee talks to Medlab TV, interview with Stefan Schock, Managing Director at Slee

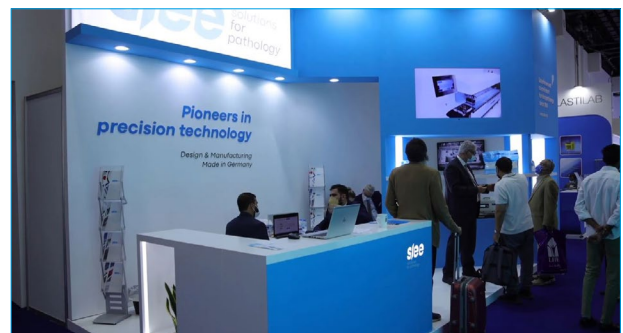

Medlab TV: How has it been over the last four days?

Stefan Schock: It is a great show, it is always a pleasure to be back in Dubai! It took us more than two years to come back. Great pleasure, great show, great companies, great people from all over the world, in particular of course from the Arabic Area, Africa, South East Asia, so it's always a perfect chance for us to meet our people and all of our friends, business partners...

Stefan, what has been the show stopper for Slee this year?

First of all people are stopping here because we are providing highest technology, highest precision since more than 20 years. (...) We have all of our engineering with highly qualified people, we are manufacturing in a completely new factory in Germany, and (...) this is the high value here in the market, even all over the world, not only in the Arabic World.

Stefan Schock:

"Technologies are driven here."

Is Dubai an important region for you?

Well, it is one of the most important regions for us! We have of course the European Union but then also this area, United States, but Arabic Area, Africa, South East Asia, these are becoming more and more important to us. Some of the technologies are driven here, by the users, by the application labs, the manufacturers, it's an excellent region!

CUT 6062: fully-automatic precision microtome

**Live on the booth:
water bath & precision microtome**

The **Slidetec Water** water bath is designed for stretching paraffin sections in histology laboratories. The fully-automatic precision microtome **CUT 6062** is designed for all applications in routine, research or industry. Years of experience and customer input have contributed to create one of the best fully-automatic microtomes available.

**Live on the booth:
paraffin embedding center**

The modular paraffin embedding center **MPS P II** features ease of operation, spacious working area, large paraffin container capacity. (...) same working height and can be arranged accordingly to laboratory requirements. The flexible 3-module system consists of a dispensing element **MPS P**, a prewarming module **MPS W** and a cooling plate **MPS C** or **MPS CX**.

**Live on the booth:
Paratec Premium and Paratec**

Paratec Premium consists of highly purified paraffin. With polymer additive for precise embedding and cutting, melting range 54 – 57 °C. Talk to us about more consumables that fit your needs!

Getting ready ...

... to welcome our guests on our booth. Very excited to meet our friends, our business partners, our customers, all who are interested in our equipment!

Great show!

**"Thank you all for a great show at Medlab in Dubai!
It has been a real pleasure for us to meet you all in person again!"**
